# 2eRT

## The all new 2eRT

Following on from the immense success of **InnEnergy<sup>®</sup>**, DFX Technology introduces **2eRT**, the next generation of energy saving devices for vendors, glass fronted chiller cabinets, easy-reach visi coolers, dump bins and more!

Using patent applied for technology, 2eRT reduces the energy consumption and thus the energy bills of chillers **by up to 40%!**

Out of trading hours, 2eRT maintains the temperature of the product at a higher temperature to reduce significantly the amount of energy being used without compromising the quality of the product. Then, using advanced DSP algorithms, 2eRT 'learns' when to lower the temperature of the product again ready for opening time. This means that by opening time the product is ready to be served as normal, perfectly chilled to your customers' satisfaction!

For use with vendors, glass fronted chiller cabinets, easy-reach visi coolers, dump bins and more!

The unique **remote wireless temperature sensor** means that 2eRT can be installed without the need for an engineer, which makes it **easily retro-fittable** in trade! In under 30 mins your 2eRT energy saving device can be installed and ready to go.

2eRT is designed for use with non-perishable goods, making it perfect for use with drinks chillers.

Remote Temperature Sensor
